DEPARTMENT OF AGRICULTURE, BENGAL.

Final Forecast of the Jute Crop of Bengal for 1921.

(NOTE.—On an average of the five years ending 1919-20, the area under jute to which this forecast relates represents some 88·5 per cent. of the total area under jute in British India.)

Season.—As reported in the preliminary forecast, the weather was too wet for the crop in its early stages in the eastern and northern districts, while drought delayed sowings in the *deshi* districts. The rainfall in July, though below normal in Western Bengal, was helpful to weeding, but in most of the jute-growing tracts in Eastern and Northern Bengal it was excessive, causing considerable damage on low lands, especially in Jalpaiguri, Rangpur, Cooch Behar, Mymensingh and Tippera. In August and September the seasonable rainfall greatly facilitated the steeping and washing operations. In the western districts the crop, however, suffered to a certain extent from insect pests.

Condition of the crop.—Owing to the unfavourable season the crop outturn is a poor one in Western Bengal, and fairly satisfactory in Northern and Eastern Bengal.

Acreage.—The area under jute is returned at 1,329,190 acres, a decrease of 876,133 acres or 39·7 per cent., as compared with last year's final figures. The decrease is attributed chiefly to—(1) unfavourable weather conditions in the *deshi* districts; (2) the low price obtained for the two preceding crops and the large carry over; (3) also to the high price of food-stuffs, which induced the cultivators to substitute food-crops for jute.

Outturn.—As in previous years the percentage figures are calculated on the basis of divisional normals, which remain as follows:—Dacca and Chittagong 3·7 each, Rajshahi 3·5, Presidency and Burdwan 3·2 bales per acre.

The total outturn of the Bengal crop is returned at 3,605,991 bales of 400 lbs. against 5,304,836 bales in last year's forecast, a decrease of 1,698,845 bales.

24 Parganas ...	47,712	24,178	84.3	76	128,377	58,973	End of August. Normal.	The decrease in area is due to want of rain-fall at sowing time and also to low price of jute and high prices of food-stuffs.
Nadia ...	58,163	33,431	66	57	123,429	60,529	August. Normal ...	The decrease in area is mainly due to low price of jute and to high price of rice. The outturn is much below the normal owing to stunted growth of the plants on account of late sowings.
Murshidabad ...	15,111	6,514	112	63.4	53,922	13,229	End of August. Late	The decrease in area is due to bad market for jute. The falling off in outturn is due to want of seasonable rain. Some damage by insect pests is also reported to have been done in Hursli and Bhagawan-gola thanas.
Jessore ...	59,350	43,579	84	94	159,164	139,787	August. Normal ...	Since the submission of the preliminary forecast, the weather conditions have been very favourable and the crop is satisfactory, except in the Bongong subdivision.
Khulna ...	9,880	4,941	78	72	24,605	11,432	End of August. Normal.	The decrease in area is due to low price of jute and to high prices of food-grains. The decrease in outturn is due to want of timely rainfall.
Burdwan ...	5,731	1,842	101.87	74.37	18,671	3,193	First week of September. Late.	Unfavourable market last year and want of sufficient rain during the sowing season account for the enormous decrease in area this year. Late sowing and drought are responsible for the low outturn.
Midnapore ...	7,983	5,511	74	66.90	18,937	11,829	Middle of September. Late.	The decrease in area is due to unfavourable weather conditions and dull market last year.
Hooghly ...	26,259	15,993	91.15	80	76,608	48,622	Third week of August. Late.	The decrease in area is due to insufficient rainfall at sowing time and to drought later on, and also to high price of food-grains and low price of jute last year.
Howrah ...	9,674	4,659	90	85	27,888	12,673	First week of September. Rather late.	The large decrease in area is due to bad weather conditions at sowing time and to dull market. Subsequent weather conditions have been quite favourable.
Rajshahi ...	80,407	44,848	60	79	170,149	125,437	The decrease in area is due to fall in price of jute and to the old stock remaining unsold. The decrease of 1,641 acres since the preliminary forecast is due to floods in Naogaon. In Nator the weather conditions have been favourable since the end of June last. In Naogaon the crop suffered a good deal from heavy rain during the end of April when the plants were young. During the latter part of May, cyclonic wind accompanied by hail-storm checked the growth of the plants in places.
Dinajpur ...	65,619	43,547	53.3	55	134,355	84,072	By the middle of August. Normal.	The decrease in area is due to low price of jute during the last two years. The outturn is much below the normal owing to incessant rainfall during the growing period.
Jalpaiguri ...	55,389	28,832	80	60	154,809	60,932	Middle of August. Normal.	The increase in area is due to the non-receipt of figures from certain unions at the time of the preliminary forecast. The low outturn is due to early sowing and to constant and heavy rainfall after sowing.
Darjeeling ...	2,803	1,435	97*	75	3,530	3,765	End of August. Rather late.	The decrease in area is due to bad market and to unfavourable weather conditions. The excessive rain has retarded the growth of the crop in the early stage.

Rangpur	241,454	138,255	75	71.97	635,517	348,295	July. Normal. Harvesting was, however, retarded in August owing to inadequate rainfall.	The decrease in area is due to (1) prevailing low prices of jute for the last two years, (2) want of a ready market, and (3) large stocks in hand remaining unsold for some time. The decrease in outturn is due to the fact that about 2,109 acres of jute lands in the Kurigram, Gaibandha and Nilphamari subdivisions were completely damaged by flood in the month of July.
Bogra	74,730	50,800	57	82.3	149,460	145,753	Middle of July. Normal.	The weather was seasonable, except for a period of drought in June.
Pabna	96,138	65,620	67	61.4	226,118	141,017	Early July	The decrease in area is due to low price of jute and to unfavourable weather conditions at the beginning. The low outturn is due to considerable damage done by early flood and insects in the Sadar subdivision.
Madda	19,000	7,470	52.86	44.3	35,160	11,580	By the end of August. Late.	The decrease of 6,730 acres compared with the preliminary forecast is mainly due to mistakes in calculating the totals in the preliminary forecast. The falling off in outturn below the normal is due to unfavourable weather at sowing time and during the early stage of the growth and also to the damage caused by flood.
Dacca	244,211	140,000	70	79	628,176	410,000	Beginning of July. Early.	The decrease in area is due to low price of jute and to sufficient stock remaining in hand from the crop of last year. The weather was seasonable at the sowing time but the plants could not thrive well owing to continuous drought later on. Early flood also caused damage on low lands. Hence the outturn is not very satisfactory.
Mymensingh	538,351	332,293	63	80	1,368,975	987,794	End of July. Normal	The increase in percentage outturn this year is due to favourable weather conditions.
Faridpur	219,100	143,000	73	84	645,334	442,300	Early July. A little earlier.	The falling off in outturn below the normal is due to (1) drought at sowing time, (2) to heavy rain in April, and (3) to early rise of rivers, which caused premature harvesting.
Bakarganj	37,623	19,412	73	76	101,797	64,897	July. Early	The fall in outturn is due to (1) excessive rain at the beginning, (2) to drought in April, which retarded the growth of the crop, and (3) to damage caused by flood and high wind during the latter part of July, which necessitated early harvesting.
Chittagong	200	200	105	81	791	600	Last week of August	The weather has been favourable and no damage is reported. The crop is cultivated for domestic use only.
Tippera	218,290	150,000	50	72	495,906	400,000	Early part of June. A little early owing to early flood.	The decrease in area is due to (1) low price last year, and to (2) uncertainty of the market rates this year. The percentage outturn is better than last year owing to more favourable weather this year.
Noakhali	36,144	7,392	49	95	65,419	25,929	Beginning of July. Normal.	The decrease in area is due to low price of jute last year and to a considerable quantity of old jute remaining in stock from last year's crop. The weather has been favourable.

Add for Cooch Behar.	24,121	12,147	45	24.6	67,473	11,346	End of July to third week of August. The harvesting was late in the Sadar, Dinhat and Mathabanga subdivisions and was normal elsewhere.	The poor outturn is due to the fact that excessive rain at sowing time caused destruction to the young plants.

**DEPARTMENT OF AGRICULTURE, BIHAR
AND ORISSA.**

Final Forecast of the Jute Crop of Bihar and Orissa, 1921.

(NOTE.—On an average of the five years ending 1919-20, the area under jute to which the Bihar and Orissa forecast relates, represents about 7·6 per cent. of the total area under jute in British India.)

Acreage.—The final district returns of the seven jute-growing districts of the province show an area under jute of 108,368 acres or in round numbers 108,400 acres, as compared with 106,400 acres reported in the preliminary forecast, 1921, and 178,800 acres last year. The decrease in area was mainly in Purnea, where it was attributed to the fall in price of jute last year and the year before and also to the accumulation of unsold stock. The unfavourable season at the beginning was also responsible for the decrease in general.

Weather conditions.—In March the rainfall was above the normal in Champaran and Purnea and below the normal in the rest of the jute districts. In April it was above the normal in Purnea, Bhagalpur, Champaran and Muzaffarpur, but below the normal in the remaining three districts. In May it was below the normal everywhere. The rainfall in June, though below the normal everywhere, did immense good to the crop. In July the rainfall was above the normal in Purnea, Bhagalpur and Balasore and below normal in the remainder. In August it was below the normal in Purnea, Cuttack and Balasore and above the normal in the remaining four districts. The season was on the whole unfavourable for the crop. Some damage was also done to the crop on low lands in Purnea by heavy rain in July.

Outturn.—In the important districts of Purnea and Cuttack the outturn of the crop has been reported as 65 and 86 per cent., respectively. Champaran reports a normal crop. Balasore, Bhagalpur, Muzaffarpur and the Santal Parganas report 93, 90, 75 and 63 per cent., respectively.

On the basis of the area and percentage outturn reported by the District Officers and taking three bales as the normal outturn per acre, the total gross outturn of the crop for the province this year comes to 225,417 bales or in round numbers 225,400 bales against 334,500 bales for last year.

The average import of raw jute into this province from Nepal during the last three years was equivalent to 79,501 bales. This figure added to the figure for the province arrived at gives a total for Bihar and Orissa of 304,918 bales or in round numbers 304,900 bales.

The weather and rainfall were not quite seasonably in the beginning. The outturn is expected to be better than that of last year as the weather condition has improved since the submission of the preliminary forecast. The figure for area in column 7 has been arrived at after investigation, the decrease being due to unfavourable weather at the beginning.
	Purnea	...	1,694,400	200,800	153,000	86,000	60	65	275,400	187,700	Latter part of July

The area under the crop this year has increased since the submission of the first forecast owing to the rainfall conditions of June last, but the decrease in area as compared with that of last year is chiefly due to the fall in the price of jute.

The decrease in area sown is due to the fall in the price of jute and unfavourable weather at the time of sowing.

**DEPARTMENT OF LAND RECORDS AND
AGRICULTURE, ASSAM.**

Final Forecast of the Jute Crop of Assam, 1921.

(NOTE.—On the average of the five years ending 1919, the area under jute in Assam represents some 3·9 per cent. of the total area under jute in British India.)

1. Season.—As indicated in the preliminary forecast, the weather from sowing time was exceptionally wet and culminated in heavy floods which caused considerable damage in the western districts of the Assam Valley and in Sylhet.

2. Area.—The area under jute has been reported by the Deputy Commissioners to be 75,800 acres, against the final figure of 124,700 acres of last year and 87,200 acres shown in the preliminary forecast of this year. The decrease is due to the very low price of jute and the unfavourable weather conditions at sowing time. Five districts have revised the areas reported in the preliminary forecast.

3. Outturn.—The outturn is estimated to be 53 per cent. of the normal per acre, against 67 per cent. (revised) in last year. Taking 3·3 bales of 400 lbs. as the normal yield per acre, the total yield of jute in Assam is calculated to be 141,700 bales, against the previous year's revised figure of 275,400 bales, or a decrease of 49 per cent.

Cachar	300	300	300	60	60	500	400	Early August. Normal	The decrease in area is due to incessant rains at the sowing time and the low outturn due to irregular and heavy rains subsequently after sowing.
Sylhet	16,000	14,300	5,800	60	60	28,300	11,500	August. Normal	The decrease in area is due to the low price of jute. The area was over-estimated in the preliminary forecast. The weather was not favourable. The floods of June and July did considerable damage to the crop.
Goalpara	42,400	36,900	24,800	50	25	93,800	20,800	First week of July. Early.	The abnormally low price of jute and the unfavourable weather at sowing time account for the decrease in area. The weather from June to August was most unfavourable: heavy rains and floods caused considerable damage to the crop.
Kamrup	8,100	15,800	11,500	70	50	36,500	19,000	Second week of August. Normal.	There was excessive rainfall at the time of sowing. The character of the weather was not good for the growth of the crop. Damage is reported to have been done by floods.
Darrang	7,000	11,400	9,500	95	65	35,700	20,400	First week of July. Early.	The decrease in area is due to the unfavourable weather at sowing time and to the fall in price. The weather during growth was not favourable. Damage by flood is reported from Mangadal subdivision.
Nowgong	5,700	21,300	20,200	95	95	65,800	63,300	15th July. Early	The weather was good at sowing time and the slight decrease in area is due to low prices. Continuous rain from June to August retarded growth. Insects are reported to have damaged the crop in some places.
Sibsagar	300	300	400	70	75	700	1,000	20th August. Normal	The increase in area is small. The weather was wet from June to August and retarded growth.
Lakhimpur	200	200	100	95	75	600	200	15th September. Normal.	Excessive rain at sowing time was the cause of the fall in area. The weather during the season was not favourable. Some damage is reported to have been done by floods.
Udaro Hills	4,100	4,200	2,300	90	50	12,500	5,400	Beginning of August. Normal.	The very low price of jute in last year reduced the area. The weather during June to August was wet and serious injury was caused by floods in June and July and a large part of the crop was destroyed.

MONTHLY WEATHER AND CROP REPORT OF BENGAL FOR AUGUST 1921.

I. Character of the season.—During the month under report the rainfall was above the normal in 20 districts; elsewhere the fall was defective. It was markedly in excess in almost all the western districts. The usual rainfall statement is appended.

II. Progress of agricultural operations.—Transplantation of winter paddy made satisfactory progress throughout the Presidency. The harvesting of autumn paddy has been nearly completed and that of jute has much advanced in North and East Bengal.

III. State of standing crops.—The condition of paddy, sugarcane and vegetables was satisfactory.

IV. Prospects and probable outturn.—The outturn of autumn paddy is anticipated to be fairly satisfactory. With the monsoon normally active in this province the prospects of transplanted winter paddy are satisfactory.

V. Damage to standing crops.—Some damage to jute and other standing crops was reported from parts of Nadia, Murshidabad, Jessore, Khulna, Malda and also from the low-lying tracts of North and East Bengal, partly from the rise of river level and partly by insect-pests.

VI. Condition of agricultural stock.—The condition of live-stock was satisfactory. Sporadic cases of cattle-disease were, however, reported from 11 districts of the province.

VII. Failure of pasturage and fodder.—Fodder and water were reported to be sufficient everywhere except in parts of Mymensingh where scarcity of fodder was felt.

VIII. Prices of food-grains.—During the second-half of the month under review the price of common rice of the cheapest quality rose in 10 districts, fell in 9 districts, and remained stationary in the rest of the province. It ranged from 4 seers 12 chitaks per rupee at Darjeeling to 7 seers 6 chitaks at Calcutta.

IX. Condition of agricultural people.—The condition of the agricultural population was fair.

The imports of raw jute amounted to 753,000 bales as against 1,263,000 bales,—a decrease of 510,000 bales or 40 per cent. The importations of gunny bags also showed a decrease to 89 million bags from 167 millions in the preceding year. The total imports of oilseeds (linseed and rape and mustard seed) decreased by 876,000 maunds or 26 per cent, from 3,352,000 maunds to 2,476,000 maunds and those of sugar decreased by 98,000 maunds or 30 per cent from 322,000 maunds to 224,000 maunds.
